

# Functional Requirements Document

HR Analytics Dashboard (Power BI)

## 1. Overview

This document defines the functional requirements for the HR Analytics Dashboard, built in Power BI, including the dark and light mode viewing capability.

## 2. Functional Requirements

| ID  | Requirement       | Description                                                             | Priority |
|-----|-------------------|-------------------------------------------------------------------------|----------|
| FR1 | Theme toggle      | User can switch the dashboard between dark mode and light mode views.   | High     |
| FR2 | Core HR metrics   | Display headcount, attrition, recruitment, and tenure metrics.          | High     |
| FR3 | Filters & slicers | Filter data by department, location, and time period.                   | High     |
| FR4 | Drill-down views  | Drill from summary metrics into department- or team-level detail.       | Medium   |
| FR5 | Data refresh      | Dashboard data refreshes on a scheduled basis from the source HR data.  | High     |
| FR6 | Access control    | Restrict dashboard access to authorized HR and management stakeholders. | Medium   |
| FR7 | Export            | Allow stakeholders to export visuals or underlying data for reporting.  | Low      |

## 3. Non-Functional Requirements

- Usability: dashboard must be navigable by non-technical stakeholders without training.
- Accessibility: dark/light modes must maintain readable contrast for all visuals and text.
- Performance: visuals should load within a few seconds under normal report usage.

## 4. Assumptions & Constraints

- Underlying HR data is available and refreshed on a regular schedule.
- Users have access to Power BI (desktop or service) to view the dashboard.

## 5. Acceptance Criteria

- Stakeholders can toggle between dark and light mode without loss of readability or functionality.
- All core HR metrics display correctly and match source data.
- Filters and drill-downs return accurate, consistent results.
